

our work: Adler Planetarium

services used:

Lambda prints

Lambda duratrans

Sintra substrate

3mil Lustre laminate

match mounting panels

When the Adler Planetarium decided to expand, the exhibit builder involved P+R and the Adler Planetarium design team from the beginning. Incorporated into the new galleries, the "Milky Way" exhibit consisted of over 200 graphics. The images ranged in size from 8"x10" to 30ft multi panel Lambda duratrans backlit transparency and color print murals. The challenge was to create an exhibit that would withstand various environmental conditions.
